

# Managed Detection and Response (MDR)

As businesses become more dependent on IT infrastructure to deliver client-facing services, securing that infrastructure is no longer optional—it's critical. With cyber threats growing in both frequency and sophistication, many organizations are turning to Managed Detection and Response (MDR) services for comprehensive, cost-effective protection. That's where MVSS365 from Xcelocloud comes in.

The MVSS365 MDR service, which is part of the broader managed services and security portfolio, provides around-the-clock global threat detection, analysis, and rapid response. Acting as an extension of your IT and support operations, this service helps detect and contain threats before they disrupt business or impact end users.

## MDR Service Workflow

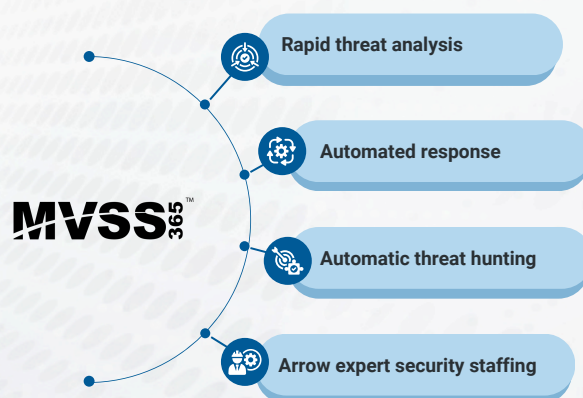

## Manage complex threats with confidence

The MVSS365 MDR service empowers you to stay focused on your core business while offloading the complexity of advanced threat detection and incident response. This flexible, self-contained solution can operate independently or integrate with existing endpoint detection tools, making it easy to deploy in any environment. With continuous automated threat hunting and rapid response, Arrow's expert team works to minimize downtime, reduce risk, and protect end users from evolving cyber threats.

For businesses without a dedicated Security Operations Center (SOC), MVSS365 also offers a fully managed SOC service, providing the infrastructure, staffing, and processes needed to respond to advanced threats efficiently and affordably. Together, the MVSS365 MDR and Managed SOC services deliver a unified, end-to-end security solution that seamlessly integrates with the broader MVSS365 managed IT services portfolio.

## Benefits

- Eliminate the cost and complexity of building an in-house SOC
- Minimize exposure to evolving cyber threats with 24x7 protection
- Reduce downtime by responding to incidents before they escalate
- Proactively detect and neutralize threats before they impact users or operations
